DETAILED ACTION

Applicant's election with traverse of the election of species in the reply filed on October 3rd 2005 is acknowledged. The traversal is on the ground(s) that the characterization of multiple species in incorrect. This is not found persuasive because the groups refer to figures, which include different elements.

The requirement is still deemed proper and is therefore made FINAL.

Claim 10-12 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected species, there being no allowable generic or linking claim.

Applicant timely traversed the restriction (election) requirement in the reply filed on October 3rd 2005.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-9, 13, 15-21 are rejected under 35 U.S.C. 102(b) as being anticipated by de Groot et al EP 0367354. De Groot discloses a medical device and method of configuring a medical device comprising a stud (see figure 2) configured to project percutaneously outward through a patient's skin layers, the stud defining an outer end (30) and having a longitudinal peripheral surface (see figure 2) extending inwardly from the outer end (30), the peripheral surface having a longitudinal porous layer thereon for promoting soft tissue ingrowth; a shoulder

Application/Control Number: 10/821,383 Page 3

Art Unit: 3763

surface (2) oriented substantially perpendicular to the stud peripheral surface and located inwardly from the stud outer end; and wherein the shoulder surface has a lateral porous layer thereon oriented substantially perpendicular to the longitudinal porous layer for promoting soft tissue ingrowth; and wherein at least one of the porous layers is characterized by a pore size within the range of 50 to 200 microns with a porosity of between 60 to 95% (col. 2 line 24) and the porous layers comprises a mesh of fibers (col. 2 line 26), the porous layers comprises a mass of sintered material (see abstract) from within a group comprised of titanium, nitinol, silver, and stainless steel and a polymeric material (col. 3 line 49). Furthermore, de Groot teaches that the medical device stud carries means for promoting healing (col. 3 line 55); and including a transitional layer (10) mounted on the stud between the stud outer end and the longitudinal layer and wherein the porous layers are formed of biocompatible material (col. 2 line 25).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.

4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claim 14 is rejected under 35 U.S.C. 103(a) as being unpatentable over de Groot et al in view of Ellis U.S. Patent Number 4,648,391. De Groot et al discloses the device as described above in reference to claim 1 but fails to explicitly disclose a cap configured for mounting on the stud outer end. Ellis describes a similar device with a cap (18). It would have been obvious to one having ordinary skill in the art at the time of invention by applicant to modify the device of de Groot et al by adding a cap as taught by Ellis in order to permit passage of air through, but restrict penetration of infectious organisms (col. 1 line 37).

Response to Arguments

Applicant's arguments filed on February 21st 2006 have been fully considered but they are not persuasive. Applicant argues that the de Groot prior art reference fails to suggest the use of a porous layer on the longitudinally extending surface. However as stated above, de Groot does suggest a porous layer on the lateral surface (2).

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period

Art Unit: 3763

will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Aamer S. Ahmed whose telephone number is 571-272-5965. The examiner can normally be reached on Monday thru Friday 9-5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nicholas Lucchesi can be reached on 571-272-4977. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
